Deep Learning - MIT Technology Review

Computational chemistry is a branch of chemistry that uses computer simulation to assist in solving chemical problems. It uses methods of theoretical chemistry, incorporated into efficient computer programs, to calculate the structures and properties of molecules and solids. It is necessary because, apart from relatively recent results concerning the hydrogen molecular ion (dihydrogen cation ...

This chapter reviews major theories of intelligence. The theories are grouped into four major theory types: (1) psychometric theories; (2) cognitive theories; (3) cognitive-contextual theories; and (4) biological theories. Psychometric theories derive from studying individual differences in test performance on cognitive tests. Questions about the structure of human intelligence, including the ...
