In mathematics, graph theory is the study of graphs, which are mathematical structures used to model pairwise relations between objects.A graph in this context is made up of vertices, nodes, or points which are connected by edges, arcs, or lines.A graph may be undirected, meaning that there is no distinction between the two vertices associated with each edge, or its edges may be directed from ...

In mathematics, model theory is the study of classes of mathematical structures (e.g. groups, fields, graphs, universes of set theory) from the perspective of mathematical logic.The objects of study are models of theories in a formal language.A set of sentences in a formal language is one of the components that form a theory.A model of a theory is a structure (e.g. an interpretation) that ...

So certifying randomness is both a philosophical problem and an urgently practical one. In the last issue of the Technologue column, I discussed an abstract, conceptual solution to the problem of how to certify randomness, based on a seminal idea from the 1960s called Kolmogorov complexity. To recap, the Kolmogorov complexity of a string of bits is defined as the length of the shortest computer ...
