An enthalpy-entropy chart, also known as the H-S chart or Mollier diagram, plots the total heat against entropy, describing the enthalpy of a thermodynamic system. A typical chart covers a pressure range of 0.01-1000 bar, and temperatures up to 800 degrees Celsius. It shows enthalpy in terms of internal energy, pressure and volume using the relationship $h = u + pv$ (or, in terms of specific ...

Enthalpy is a concept used in science and engineering when heat and work need to be calculated. The name comes from the Greek word "enthalpos" ($\epsilon\theta\alpha\lambda\pi\omicron\varsigma$), meaning "to put heat into". The idea and the word was made up by the Dutch scientist Heike Kamerlingh Onnes in 1909. When a substance changes at constant pressure, enthalpy tells how much heat and work was added or removed from the ...

In statistical mechanics, entropy is an extensive property of a thermodynamic system. It is closely related to the number Ω of microscopic configurations (known as microstates) that are consistent with the macroscopic quantities that characterize the system (such as its volume, pressure and temperature). Under the assumption that each microstate is equally probable, the entropy is the natural ...

High-entropy alloys (HEAs) are presently of great research interest in materials science and engineering. Unlike conventional alloys, which contain one and rarely two base elements, HEAs comprise multiple

principal elements, with the possible number of HEA compositions extending considerably more than conventional alloys.
