including solutions or partial solutions to open problems suggested by various researchers in Extremal Graph Theory, Extremal Finite Set Theory and Combinatorial Geometry. This is not meant to be a comprehensive survey of the area, it is merely a collection of various extremal problems, which are hopefully interesting.

Extremal Combinatorial Problems and their Applications

Combinatorial research has proceeded vigorously in Russia over the last few decades, based on both translated Western sources and original Russian material. The present volume extends the extremal approach to the solution of a large class of problems, including some that were hitherto regarded as ...

Extremal Combinatorial Problems and Their Applications

Problems in combinatorial geometry are often simply described, and usually involve a finite set of points, lines, convex sets, and other geometric objects in Euclidean space. Extremal problems in the field asks how large or small a finite set of geometric objects can be under certain restrictions. For example, given a set of

Problems in Extremal and Combinatorial Geometry Thomas A. Plick Advisor: Ali Shokoufandeh, Ph.D. This thesis deals with three families of optimization problems: (1) Euclidean optimization problems on random point sets; (2) independent sets in hypergraphs; and (3) packings in point lattices. First, we consider bounds on several monochromatic and

Problems in Extremal and Combinatorial Geometry

In this thesis, we discuss some extremal combinatorial problems in the theory of relational databases. We explore many of the most important results in this area.

Extremal Combinatorial Problems and Their Applications

Extremal Combinatorics deals with the problem of determining or estimating the maximum or minimum possible value of an invariant of a combinatorial object that satisfies certain requirements. Problems of this type are often related to other areas including Computer Science, Information Theory, Number Theory and Game Theory.
