Mathematics 490 " Introduction to Topology Winter 2007 1.3 Closed Sets (in a metric space) While we can and will define a closed sets by using the definition of open sets, we first define it using the notion of a limit point. Definition 1.3.1. A point  $z$  is a limit point for a set  $A$  if every open set  $U$  containing  $z$

Introduction to Topology Tomoo Matsumura November 30, 2010 Contents ... A topology is a geometric structure defined on a set. Basically it is given by declaring which subsets are "open" sets. Thus the axioms are the abstraction of the properties that open sets have.

This course introduces topology, covering topics fundamental to modern analysis and geometry. It also deals with subjects like topological spaces and continuous functions, connectedness, compactness, separation axioms, and selected further topics such as function spaces, metrization theorems, embedding theorems and the fundamental group.

1 Introduction Topology is simply geometry rendered exible. In geometry and analysis, we have the notion of a metric space, with distances specified between points. But if we wish, for example, to classify surfaces or knots, we want to think of the objects as rubbery. Examples. For a topologist, all triangles are the same, and they are all the

General Topology. The goal of this part of the book is to teach the language of mathematics. More specifically, one of its most important components: the language of set-theoretic topology, which treats the basic notions related to continuity. The term general topology means: this is the topology that
