

molecular cell biology karp pdf

Cyclin is a family of proteins that control the progression of cells through the cell cycle by activating cyclin-dependent kinase (CDK) enzymes.

Cyclin - Wikipedia

The hydrophobic effect is the observed tendency of nonpolar substances to aggregate in an aqueous solution and exclude water molecules. The word hydrophobic literally means "water-fearing", and it describes the segregation of water and nonpolar substances, which maximizes hydrogen bonding between molecules of water and minimizes the area of contact between water and nonpolar molecules.
