Optoelectronics (or optronics) is the study and application of electronic devices and systems that source, detect and control light, usually considered a sub-field of photonics. In this context, light often includes invisible forms of radiation such as gamma rays, X-rays, ultraviolet and infrared, in addition to visible light. Optoelectronic devices are electrical-to-optical or optical-to ...

The synthesis, properties, and applications of graphene and graphene oxide-based materials are reviewed in this article. Graphene can be synthesized by chemical vapor deposition (e.g., on Cu, Figure a) and graphene oxide is a precursor for other graphene-based materials (e.g., "paper", Figure b).

Ferroelectric bilayers are leveraged in concert with a metasurface to create tunable infrared devices possessing high-speed, low-power and latchable switching (see article number 1800862 by Thomas E. Beechem and co-workers). Together, these characteristics highlight the potential of ferroelectrics for dynamic infrared elements while also emphasizing the general utility of leveraging phonons to ...

Overview. Transparent conductive oxides (TCO) are doped metal oxides used in optoelectronic devices such as flat panel displays and photovoltaics (including inorganic devices, organic devices, and dye-sensitized solar cell). Most of these films are fabricated with polycrystalline or amorphous microstructures. Typically, these applications use electrode materials that have greater than 80% ...

1. INTRODUCTION - A transistor is a small electronic device that can cause changes in a large electrical output signal by small changes in a small input signal. That is, a weak input signal can be amplified (made stronger) by a transistor. For example, very weak radio signals in the air can be picked up by a wire antenna and processed by transistor amplifiers until they are strong enough to be ...

Nanocombs have been synthesized by thermal evaporation of ZnO powder in a tube furnace ().The comb-like structures grow on an alumina substrate placed downstream, and growth is only observed in the region where the temperature ranges from $\frac{1}{4}1050\text{â€}1250\text{^\circ C}$, regardless of the evaporation temperature.
