A pattern is a regularity in the world, man-made design, or abstract ideas. As such, the elements of a pattern repeat in a predictable manner. A geometric pattern is a kind of pattern formed of geometric shapes and typically repeated like a wallpaper design.. Any of the senses may directly observe patterns. Conversely, abstract patterns in science, mathematics, or language may be observable ...

Patterns in nature are visible regularities of form found in the natural world. These patterns recur in different contexts and can sometimes be modelled mathematically. Natural patterns include symmetries, trees, spirals, meanders, waves, foams, tessellations, cracks and stripes. Early Greek philosophers studied pattern, with Plato, Pythagoras and Empedocles attempting to explain order in nature.

Flame chemistry in incineration systems involves the formation of many organic products of incomplete combustion, including chlorinated species such as polychlorinated biphenyls (PCB), polychlorinated dibenzo-p-dioxins (PCDD), and polychlorinated dibenzofurans (PCDF). Because the latter are of environmental concern, a great deal of research has been expended on understanding their formation.

Here \hat{I} , $p = 0.295$ represents the spherical percolation threshold. While this would give a prediction of the formation of a crystal percolation network, it was noted that this will lead to gelation only if the number density and strength of the crystalâ€“crystal interactions are sufficient to impart solid-like properties to the fluid (). Overall, Paso (2005) noted that the gel point of a waxy ...
