Physics of Surface, Interface and Cluster Catalysis 4-3. shown here exemplifies the ideas discussed above regarding the timescale separation. In each basin, the system undergoes many vibrations in the well before traversing the barrier via some mechanism and into the adjacent minimum.

Physics of Surface, Interface and Cluster Catalysis: ch4

Serving as a general introduction to surface and interface science, this book focuses on basic concepts rather than specific details, and on intuitive understanding rather than merely learning facts. The text reflects the fact that the physics and chemistry of surfaces is a diverse area of research that involves classical scientific and engineering disciplines.

surface forces, and the low surface elasticity, gravity and other external forces tending to separate the phases. Sections 7.2 and 7.3 consider effects related to the surface tension of surfactant solution and capillarity. Section 7.4 presents a review on the surface forces due to the intermolecular interactions.

surface tension causes the liquid surface to contract, a force F is needed to move the slider to the right and extend the surface. The surface tension is denoted by the Greek letter gamma (γ) and, as indicated by Equation 1, is the magnitude F of the force per unit length over which it acts.
