OpenMP (Open Multi-Processing) is an application programming interface (API) that supports multi-platform shared memory multiprocessing programming in C, C++, and Fortran, on most platforms, instruction set architectures and operating systems, including Solaris, AIX, HP-UX, Linux, macOS, and Windows. It consists of a set of compiler directives, library routines, and environment variables that ...

EDUCATION Many computer languages make it very difficult to teach programming because the student is forced to learn many idiosyncrasies and nuances of the language itself (see the PDF document below for more information). It provides detailed information on why RobotBASIC is an ideal language for both introductory and more advanced programming classes.

Courses at Stanford University – John R. Koza. Genetic Algorithms and Genetic Programming Course: BMI 226 / CS 426 / EE392K course on genetic algorithms and genetic programming is co-listed in the Department of Computer Science in the School of Engineering, Department of Electrical Engineering in the School of Engineering, and BioMedical Informatics in the School of Medicine.

johnkoza

In computer science, a library is a collection of non-volatile resources used by computer programs, often for software development. These may include configuration data, documentation, help data, message templates, pre-written code and subroutines, classes, values or type specifications. In IBM's OS/360 and its successors they are referred to as partitioned data sets.

Library (computing) - Wikipedia

I have a bibtex database of optimization references (900K) available online. These are mostly interior point references. A searchable version of this bibliography is also available. I also have an unorganized list of announcements of computational packages that are available for solving a variety of problems. This page is not updated often enough, so some of the links are no longer functional.
