sounds like a quantum leap to me! Before the fall, God had created one realm from gravity waves to His glory. This present human realm is up through the electromagnetic spectrum to the speed of light. The interesting point about the speed of light slowing down is that when Lucifer (the bearer of light) rebelled in

Quantum Leap: Heat Wave by Melanie Kent

Quantum Leap follows the narrative of Dr. Sam Beckett (Bakula), a physicist who has become stuck in the past as a result of a time-travel experiment gone wrong, and his attempts to return to his present, the late 20th century, by altering events in the past for the better, with the aid of a hologram of his friend Admiral Al Calavicci (Stockwell), monitoring him from Sam's present.

Quantum Leap (continued) isolation technology. This task is com-plicated by the fact that changes in temperature change the properties of the shield, while the minute magnetic fields that penetrate the shielding produce heat that in turn further changes the properties of the shield. In the past, D-Wave used handbook

Quantum Leap | ANSYS Advantage

Quantum computers take advantage of quantum mechanics to speed up certain important types of computing problems by many orders of magnitude. Harnessing quantum effects requires reducing the temperature of the processor to near absolute zero and providing shielding that reduces stray magnetic fields to 50,000 times less than Earthâ€™s magnetic field.

The quantum theory does a good job of explaining why objects can give off light when they are heated to a high temperature. Heat a steel nail in a lab burner flame. The nail absorbs thermal energy, this causes the atoms in the metal to become excited. As they gain energy, the electrons will make quantum leaps. They will jump to higher energy levels.
