Field electron emission (also known as field emission (FE) and electron field emission) is emission of electrons induced by an electrostatic field. The most common context is field emission from a solid surface into vacuum. However, field emission can take place from solid or liquid surfaces, into vacuum, air, a fluid, or any non-conducting or weakly conducting dielectric.

Quantum optics (QO) is a field of research that uses semi-classical and quantum-mechanical physics to investigate phenomena involving light and its interactions with matter at submicroscopic levels. In other words it is quantum mechanics applied to photons or light.

Quantum correlation is a key resource for quantum computation. It is recognized that a scalable measure for quantum correlation is important for the field of quantum information processing.

The quantum wave function is moving in hidden extradimensions of space-time with speed, which exceeds the speed of light. There are the phase waves, of which we understand the EM variety.
