satellite remote sensing for pdf

Remote Sensing Remote sensing is a tool or technique similar to mathematics. Using sensors to measure the amount of electromagnetic radiation (EMR) exiting an object or geographic area from a distance and then extracting valuable information from the data using mathematically and statistically based algorithms is a scientific activity.

Satellite Remote Sensing Remote sensing of the Earth from orbital altitudes was recognized in the mid-1960s as a potential technique for obtaining information important for the effective use and conservation of natural resources. The studies began when the Tiros satellites (1960) provided

Introduction to Satellite Remote Sensing - edc.uri.edu

Satellite remote sensing and its application to coastal waters are briefly documented, giving emphasis to the retrieval of ocean color products. The document addresses the complexity of coastal water optics, imposed by unrelated multiple compounds in the water column, affecting the light field through their own absorption and scattering properties.
